Identification

A common cattail is identified by their long sword-like pointed leaves with parallel veins that grow directly from the rhizomes, which often grow horizontally underwater or in very wet mud. But the cattail can be a pest to grazing animals.

FUN FACTS

Piktochart: 2019

Surprisingly you can eat cattails as a meal. You can make Cattail bud pickles, cattail shoot pickles and cattail blinis, but also much more. Muskrats eat the cattail.

Also, the reproduction system includes the seeds blowing into the wind and then falling into the ground and reproducing.
