Chipmunks

By: Lucas Byrne and Sam Fullenkamp

What They Eat

They eat nuts, seeds, berries, birds' eggs, snails, mushrooms, small animals, insects, baby birds, and the mothers lick bricks.

Location of Chipmunks in USA

The Eastern chipmunks that live on the East coast of the United States are found in the states below.

Reproduction

Mating usually happens during March-late June/mid-July and babies are born about a month later. The females can give birth from anywhere from 2-6 pups at once.

(We Heart It, 2018)

Nusense

Chipmunks can crawl up gutters and find a way to steal from bird feeders.

(NearSay, 2018)

(Yankee Magazine, 2018)

Benefits

Chipmunks can plant seeds on accident, that they stole from bird feeders

(KyForward, 2018)

(WikiHow, 2018)

Diseases

Chipmunks can carry rabies but they are rare to find chipmunks with them
